

Summary for my Low-Fi prototype design:

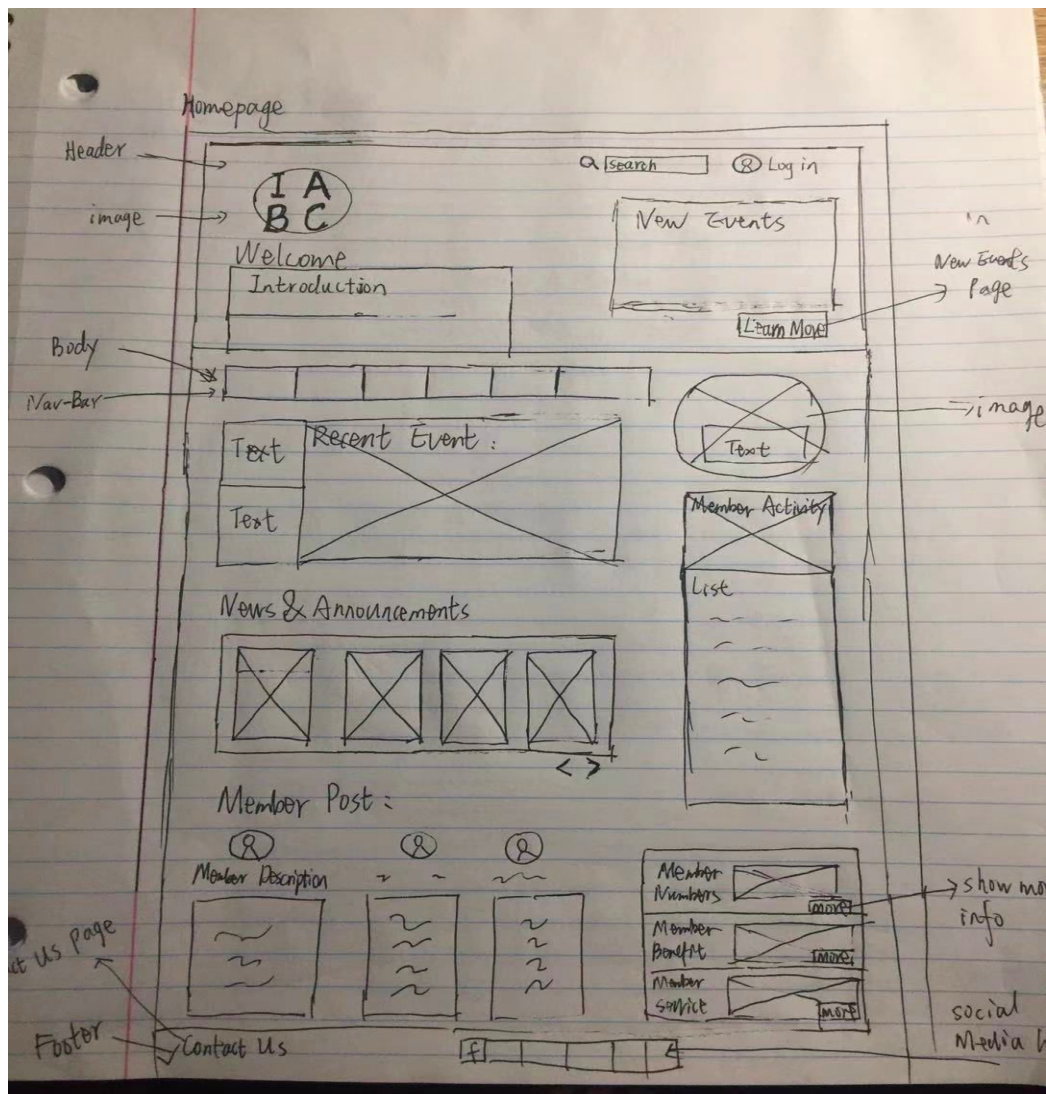

- Signifiers:**

Most of the pages have submit buttons and search icons, that user is very clear to know they can interact.
- Affordances:**

For example ,the news event on the main page, most of the members will find it on the main page, so they do not have to browse every page.
- Constraints:**

For future design in the payment page, will let users to make sure they are ok with the price, the payment method by adding more alert windows.
- Mapping:**

The nav bar in the membership page, users can click different type name to change the content in the table, and the chosen part will be highlighted, very easy to understanding where the users are in.
